PROFESSIONAL SUMMARY

Cybersecurity student at BYU–Idaho with hands-on experience in incident response, security log analysis, threat detection, and enterprise network defense. Proficient in Security Onion, Splunk, Wireshark, Palo Alto, and FortiGate. Proven ability to analyze complex security events, produce formal IR reports, coordinate across teams, and work independently on projects from start to finish. Seeking to support Melaleuca's Incident Response team Summer 2027.

TECHNICAL SKILLS

Security & IR:	Security Onion, Splunk, Wireshark, Nmap, Nessus, Palo Alto, FortiGate, IDS/IPS, SIEM, Log Analysis, Incident Response, Threat Detection
Compliance:	PCI-DSS awareness, GDPR concepts, access auditing, permissions review, EULA & data privacy policy analysis
Systems:	Windows Server, Linux (Ubuntu/Kali), Active Directory, SSL VPN, Duo MFA, Zero Trust architecture, Cisco Packet Tracer
Languages:	English (Fluent), French (Fluent)

EDUCATION

B.S. Cybersecurity — Brigham Young University–Idaho, Rexburg, ID

Expected: April 2027

PSSA Certified | Coursework: Network Security, Digital Forensics, Linux Sys Admin, Security Operations Analyst

KEY PROJECTS & LABS

- Designed enterprise security architecture with Palo Alto + FortiGate dual-firewall topology across 5 segmented network zones (Outside, DMZ, Inside, Secure, Interconnect); configured NAT, routing policies, and site-to-site VPN.
- Deployed Security Onion for IDS/IPS monitoring and traffic analysis; wrote custom SIGMA detection rules for brute force, C2 beaconing, suspicious URLs, and lateral movement (MITRE ATT&CK T1021.006).
- Integrated Sysmon endpoint telemetry into Splunk SIEM pipeline; performed pcap analysis with Wireshark and tshark (Zeek/Suricata) to reconstruct attacker kill chains and produce formal SOC incident response reports.
- Implemented SSL VPN with Duo MFA Zero Trust authentication across 4 network segments; audited access and enforced least-privilege permissions to reduce attack surface.
- Completed full SOC investigation of a simulated domain compromise (ACMEONIONS); reconstructed multi-stage attack flow, authored SIGMA detection rule, and delivered a formal written IR report with remediation recommendations.

EXPERIENCE

Student Buyer – Cyber Procurement Agent

2025 – Present

Brigham Young University–Idaho • Rexburg, ID

- Audited 10+ vendor contracts for security and compliance, reviewing EULAs, data privacy policies, and access permissions to ensure alignment with institutional security requirements and regulatory standards.
- Coordinated cross-institutional meeting between BYU-Idaho, BYU, and Google; facilitated discussion and drove consensus between senior stakeholders on shared IT security initiatives and compliance obligations.
- Evaluated software tools for cybersecurity procurement including print management, identity, and SaaS platforms — balancing security risk, cost, and operational need.

Technical Support Analyst

Aug 2024 – Dec 2024

FamilySearch • Accra, Ghana

- Resolved account, access, and technical issues for 100+ users/week with a 95% first-contact resolution rate, demonstrating strong problem-solving and customer communication skills across a global user base.
- Supported 3,000+ users/month via Zendesk and Genesys ticketing systems, boosting CSAT scores by 30% through organized, detail-oriented, and follow-through-focused case management.
- Conducted 6,000+ metadata audits maintaining 98% data integrity across archival systems — applying rigorous attention to detail and organizational discipline critical for security compliance work.

ACHIEVEMENTS & VOLUNTEERING

- Hosted peer cybersecurity workshops on Nmap, vulnerability scanning, and Wireshark packet analysis, building team communication skills and promoting a security-first culture.
- Built and submitted a SIGMA detection rule (author: Agyare) in Security Onion targeting WinRM lateral movement, aligned to MITRE ATT&CK framework.
